DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, drawn to a variable gain amplifier, classified in class 330, subclass 254.
- II. Claims 5-20 and 22-33, drawn to an AM modulated signal reception circuit, classified in class 455, subclass 334.
- II. Claim 21, drawn to a preamplifier with specific biasing circuit, classified in class 330, subclass 261 and 455, subclass 270.

The inventions are distinct, each from the other because of the following reasons:

In the instant case Inventions I, II and III are directed to related products. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, Group I is concerned with a differential amplifier comprising circuit components to vary the gain. Group II is concerned with the functional sections of an AM receiver. Group III is directed to the biasing method to the input terminals of a differential preamplifier.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
